Commissions & Works Carried out During 2003

We started the year with the refurbishment of a private jetty at Calstock and the installation of a 1 ton boat handling crane. This jetty was originally built during the late 1800's for the mining trade. The original piles were in such good condition, below the mudline that they were cut level to give a good base then new piles were attached

with heavy steel brack-etry in order to take the deck boards.

Our next project was to design, supply and install marine auxiliary and diving compressors for diving vessel W200. This included a new 3 phase power system and fitting of the dive control panel, for H.M. Dockyard, Plymouth.

Our association with Meridian Maritime International of Louth, England, continues with Joshua Preston supplying Warranty Surveyors for heavy lift operations in Italy, Turkey and North Africa.

Joshua Preston surveyors also attended West Africa for damage reports, together with Jack-up Oil Rigs movements.

2003 closed with our attendance on the 50,000 ton semi submersible barge Zhong Ren 3 loaded with a 13,000 ton spar buoy. The 9,000 nautical mile sea towage of from Jebel Ali, UAE to Pascagoula Mississippi, USA took 61 days.

All our senior staff are ex sea going personnel and have had many years experience aboard. Engineers are available to assist ships staff in routine maintenance

and necessary works in conjunction with classification societies.

Survey work is complimented by high quality photographic records, from stills to DVD.

Transport Division

Using our own dedicated transport, auxiliary equipment can be unshipped and returned to our works for complete refurbishment.

Transport of small vessels of up to 20 feet can be accommodated.

5 ton mobile crane available

Our transport department also has the facility for servicing of medium sized H.G.V's and plant.

Special Projects Division

Joshua Preston Special Projects Division received instruction from Fluidsystem Hydraulics Ltd to, engineer and commission an important hydraulic facility for the container industry. The department head, Mr M.T. Fry attended the clients facilities in the Far East to revise the pipe-work layout and oversee final installation of the hydraulic system.

Model Ford TT Truck Project

During the year special projects also undertook the complete rebuilding and overhaul of 1924 Ford TT Truck. The vehicle was exhibited at the Henry Ford Centenary Celebration held at Sparkford England.

Other automotive projects include; design and development of a Special GT Class vehicle and equipment, advise and install special equipment to a Marlin Cabriolet.

Castrol and Multispec Lubricating Oils

Suppliers of the complete Castrol range. Together with Multispec oils which are blended by one of the countries oldest lubricant suppliers.

Retail and wholesale available at competitive prices.
